Data Intelligence Solutions

***R Project Machine Learning
Malaria Dataset***

Project Description:

In this particular project, we are using the seeds dataset that contains information . However, before you go ahead and Perform EDA, it is advised that you first pre-process and study the data, since it may contain some irregularities and noise.

Data Cleaning

1. Filter the Gujarat, Rajasthan and Maharashtra in state.
2. Select the data where mortality is high and very high.
3. Handle the missing values in mortality rate column .
4. Rename the mortality column to mortality_category.

Algorithms. (Use Complete Data)

1. Classification on mortality column.
2. Regression on mortality_rate. (drop the mortality column).
